

DATA & OPERATIONS ANALYST | ANALYTICS ENGINEER | DATA AUTOMATION

Data and operations analyst specializing in building reliable data systems that improve operational performance, reduce manual reporting errors, and turn complex business workflows into decision-ready insights. Strong background in SQL, Python, BigQuery, Google Apps Script, dashboards, variance analysis, root-cause diagnosis, and process automation. Proven ability to bridge business operations and technical implementation across fintech, medtech, and financial environments.

Core Competencies

Data Analytics & Diagnostics: Root Cause Analysis, Variance Analysis, Distribution Analysis, Operational Forecasting, SLA Monitoring, Performance Risk Monitoring, Hypothesis Testing

Data Engineering & Automation: SQL, BigQuery, Python, Apps Script, REST APIs, JSON, FastAPI, Redis, Docker, Compute Engine, Cloud Scheduler

Business Intelligence & Reporting: Looker Studio, Metabase, Google Sheets, Dashboard Design, Metric Governance, Executive Reporting

Operations & Process Improvement: Process Mapping, Data Validation Controls, Financial Reconciliation, Inventory Audit, Cross-Functional Stakeholder Management

Professional Experience

Process Analyst Watu Credit, Nairobi, Kenya	January 2025 - Present
- Built automated Python and SQL pipelines in BigQuery to extract, validate, and analyze high-volume operational data, reducing manual reporting errors by 90%. - Designed validation controls and metric logic to identify structural data gaps, improve reporting reliability, and strengthen analytical discipline across operations workflows. - Developed advanced Google Sheets models using Google Apps Script, array functions, and cross-sheet validation logic to automate recurring checks and reduce manual intervention. - Analyzed throughput, SLA, and operational performance data to distinguish normal variation from meaningful business deviations, supporting faster root-cause diagnosis. - Built interactive Looker Studio dashboards to track leading and lagging indicators, giving Risk and Operations teams real-time visibility into execution gaps and workstream deterioration. - Architected operational automation solutions using Python, BigQuery, FastAPI, Redis, Docker, and GCP to reduce bottlenecks in field operations and escalation workflows.	
Data Analyst Mpharma, Nairobi, Kenya	June 2024 - January 2025
- Built SQL-based supply and demand models using historical sales and inventory data, improving inventory forecast accuracy by 20%. - Led monthly stock-take reconciliations by validating physical counts against ERP records, strengthening measurement integrity and official asset reporting. - Partnered with warehouse and procurement teams to investigate stock discrepancies, identify root causes, and recommend process improvements. - Automated inventory audit workflows using Python, reducing operational stock variances by 15% and saving approximately 10 staff-hours per week. - Built self-service dashboards in Metabase to monitor inventory performance, variance trends, and operational risk indicators.	
Accountant Cyntiac Digital Solutions, Nairobi, Kenya	March 2019 - November 2023
- Conducted monthly variance analysis comparing actuals against budgets to identify cost drivers, operational bottlenecks, and financial performance risks. - Automated financial reporting dashboards in Advanced Excel, reducing monthly reporting time by 60%. - Developed a structured month-end close pack with automated variance checks, reducing reporting cycle time by 40%. - Managed high-volume reconciliations, internal control checks, and compliance documentation, supporting accurate financial reporting and operational accountability. - Presented root-cause findings and cost-saving recommendations to management, improving decision-making around expenses, controls, and process efficiency.	

Education & Certifications

Bsc of Economics & Statistics -University of Nairobi	BigQuery for Data Analysts - Google Cloud
CPA - NIBS College	Data Engineer Associate - DataCamp
	Professional Data Analyst - DataCamp
